

ABSTRACT

This invention provides substituted pyrimido-pyrimidines that are useful for treating cell proliferative disorders, such as cancer and restenosis, as well as angiogenesis and atherosclerosis. The invention compounds have Formula I:

I

where

W is NH, S, SO, or SO₂,

R¹ includes alkyl, cycloalkyl, phenyl, substituted phenyl, heteroaryl and substituted heteroaryl;

R² includes alkyl, cycloalkyl, phenyl and substituted phenyl;

R³ includes alkyl and aryl such as phenyl and substituted phenyl;

R⁸ and R⁹ include hydrogen and alkyl, and the pharmaceutically acceptable salts thereof.

The invention also provides pharmaceutical formulations comprising a compound of Formula I together with a pharmaceutically acceptable carrier, diluent, or excipient therefor, and a method for treating angiogenesis using said compounds.
